Messaging Survey - November 2026 Wave
Toplines - Democracy Corps Hispanic Sample

This survey is based on 564 interviews conducted by YouGov on the internet of hispanic voters. The sample was weighted according to gender, age, race/ethnicity, education, religion, 2026 election results, state of residence and 2024 presidential vote, based on targets provided by Democracy Corps. Respondents were selected from YouGov's online panel to be representative of 2026 hispanic voters. The weights range from 0.16 to 6.31 with a mean of 1 and a standard deviation of 0.87.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetted sample is approximately 5.5%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + \text{CV}^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
